

Columbus V-2000 Config Toolkit

macOS — First Open

If macOS says the app **is damaged and can't be opened**, the download is fine — Gatekeeper has quarantined this unsigned build.

1. Open the DMG and drag the app into **Applications**.
2. Open **Terminal**, paste this command, press Return:

```
xattr -cr "/Applications/Columbus V-2000 Config Toolkit.app"
```

3. Open the app again from **Applications**.

You only need to do this once per Mac after installing from the DMG.
